

THERE'S A NEW STANDARD OF CARE AND A NEW DAY FOR CANCER PATIENTS....TREAT YOUR PATIENTS WITH A TRULY INTEGRATED APPROACH TO RADIATION THERAPY

In the world of Radiation Oncology now there is an advanced targeting system that provides unparalleled accuracy for cancerous tumors even during patient movement.

4-Dimensional Radiation Therapy (4-D RT) is one of the latest advances available in radiation oncology to target tumors that move with breathing. 4-D RT allows the radiation oncologist to track the tumor's motion so that precise radiation can be aimed at the tumor without risking a marginal miss.

The 4-D RT program works as part of the Hi-Art Tomo Therapy treatment system. There are only two Tomo Therapy Hi-Art treatment system's in New York City. Regional Radiology at 360 Bard Avenue in Staten Island not only has this most advanced new standard of care for your Cancer patients, it also has the finest Radiation Oncologists in New York, as well. (Our CV's are attached) Our Radiation Oncologists work with you as a specialist and/or referring physician while providing your patient with a platform for truly personalized care and treatment.

We offer the comfort of a private medical facility with on-time appointments, and a level of comfort that may not be available in a hospital setting. We offer privacy in non-crowded, pleasant surroundings. Certainly there is enough anxiety prior to treatment, so we minimize that during the patient's visit.

Kindly look through our brochure and feel free to contact Dr. Marc Adams M.D. or Dr. Hoon Lee, M.D. from our Radiation Oncology team at 718-876-2023 to discuss how we can work with you and your patients. It is our intent to deliver excellent service in working with you, the referring physician, and in treating your patient.
